Output Templates

Exact format specs for every audit output. Don't deviate.

Spreadsheet template: `[brand]_audit.xlsx`

Single sheet. Column order matters. Keep the column names exactly as listed.

Column	Type	Notes
product_name	text	As listed on brand site
product_url	text	Direct link to product page
brand_category	text	How the brand categorizes it (e.g., "Hydrating Cream Cleanser")
product_type	text	One of the 12 Puberty Scanner types
ingredients_verbatim	text	Full INCI list copy-pasted as printed
tier	text	Puberty Safe / Use Caution / Avoid (Mild) / Avoid (Moderate) / Avoid (High Priority Swap)
flag_count	integer	Number of flagged ingredients (excluding naturally occurring allergens)
flagged_ingredients	text	Format: `Ingredient Name [risk numbers] / Ingredient Name [risk numbers]` separated by `/`
naturally_occurring_allergens	text	Same format, separate column
unknown_ingredients	text	Comma-separated list
automatic_escalation	text	Blank, OR "heavy metals" / "PFAS" / "formaldehyde-releaser" / "carcinogen in leave-on"
one_line_summary	text	Neutral analytical summary, not consumer voice
audit_notes	text	Anything weird about the scrape — conflicts, ambiguities, reformulation hints
audit_status	text	"complete" / "ingredients not found" / "page error" / "needs review"

# [Brand Name] Audit — Content Mining Report

**Date audited:** [YYYY-MM-DD]
**Products audited:** [N]
**Source:** [brand_url]

---

## Section A — Brand-level callout

**Headline finding:** [One sentence. Example: "Of 31 Innersense products audited, 0

**Tier distribution:**
- Puberty Safe: [N] ([%])
- Use Caution: [N] ([%])
- Avoid (Mild): [N] ([%])
- Avoid (Moderate): [N] ([%])
- Avoid (High Priority Swap): [N] ([%])

**Single most-flagged product:** [Product name] — [N] flags. [One sentence on what's

**Cleanest product (if any):** [Product name] — [tier]. [One sentence on why it stan

**Content angle for Section A:**
[1-2 sentences Nina-Marie can build a "I scanned every [brand] product" post around.

---

## Section B — Pattern callouts

**Most common flagged ingredient:** [Name] — appears in [N] of [Total] products.

**Most common risk category:** Category [N] ([category name]) — flagged in [N] produ

**"Clean marketing, dirty formula" finds:**
[List products that market themselves as clean/natural/non-toxic but pull Avoid grad

**Repeated naming patterns:**
[e.g., "Every conditioner contains at least one `-nium` ingredient (12 of 12)." Or:

**Content angles for Section B:**
[2-3 separate angle ideas Nina-Marie can build pattern-callout posts around. Example
```

```
---

## Section C — Comparison angles

**Best vs worst within categories:**
[For each major product category in the brand's catalog, list the best and worst gra

- Cleansers: Best = [X] ([tier]). Worst = [Y] ([tier]).
- Conditioners: Best = [X] ([tier]). Worst = [Y] ([tier]).
- Stylers: Best = [X] ([tier]). Worst = [Y] ([tier]).

**Similar marketing, different grades:**
[Products that sound interchangeable in marketing but score very differently. Useful

**Cleanest in each category:**
[The least-flagged product per category, even if it's still in an Avoid tier.]

**Content angles for Section C:**
[2-3 comparison post ideas with the specific products and data points.]

---

## Raw data summary

**Unknown ingredients across the audit (manual review queue):**
[Deduplicated list of every ingredient flagged as `unknown — manual review needed`.]

**Reformulation flags:**
[Anything that looked like the brand recently reformulated, or where the site copy a
